1 PROBLEM

(Misc 6.24) Compute $P(A|B)$, if $P(B) = 0.5$ and $P(A \cap B) = 0.32$

2 SOLUTION

For two events A and B, by definition,

$$\Pr(A|B) = \frac{\Pr(AB)}{\Pr(B)} \quad (2.0.1)$$

Given $\Pr(B) = 0.5$ and $\Pr(AB) = 0.32$

$$\Pr(A|B) = \frac{0.32}{0.5} \quad (2.0.2)$$

Thus,

$$\Pr(A|B) = 0.64 \quad (2.0.3)$$
